## **Harris Geospatial Solutions ENVI Conference**

---

**Tammy Owen - Worldwide Director of Defense, Intelligence, and Security**

# L3Harris Merger Update – committed to excellence

# L3HARRIS™

L3Harris Technologies is an agile global aerospace and defense technology innovator, delivering end-to-end solutions that meet customers' mission-critical needs.

» Visit [L3Harris.com](https://www.L3Harris.com)

1 CY18 financials. 2 EBIT excluding discontinued operations is defined as net income plus interest expense and income taxes. 3 Net cash from continued operations less net capex

# Four mission - aligned segments

## Integrated Mission Systems

**Sean Stackley**  
President,  
Integrated Mission  
Systems

Leading technology integrator to U.S. and international militaries for Intelligence, Surveillance and Reconnaissance, airborne and maritime platforms

**Headquarters**  
Palm Bay, Florida

## Space & Airborne Systems

**Ed Zoiss**  
President,  
Space & Airborne  
Systems

Mission solutions for space and airborne domain with defense, intelligence and commercial applications

**Headquarters**  
Palm Bay, Florida

## Communication Systems

**Dana Mehnert**  
President,  
Communication  
Systems

Ground and airborne communications and network systems for U.S./International militaries, and commercial customers

**Headquarters**  
Rochester, New York

## Aviation Systems

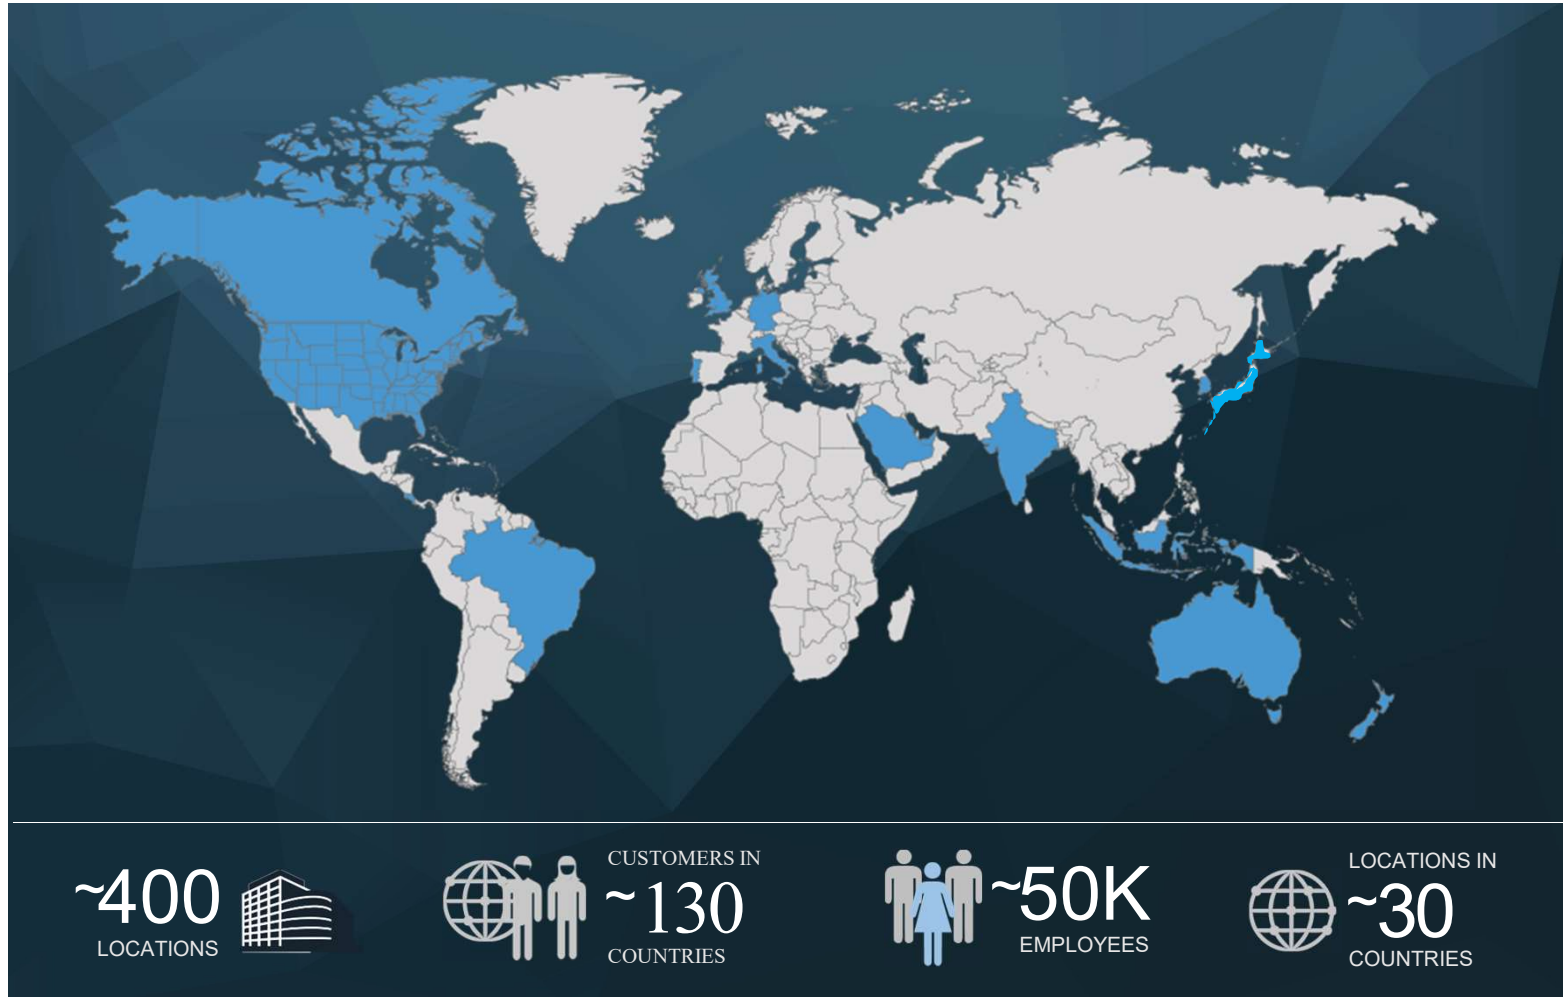

**Todd Gautier**  
President,  
Aviation Systems

Commercial and military aviation solutions, systems, networks and pilot training

**Headquarters**  
Arlington, Texas

# Global footprint

## **Harris Geospatial Solutions ENVI Conference**

---

**Cherie Muleh - Asia Pacific Regional Manager**

# Challenges We Face

## Socio-Economic Security

Understand and protect critical components, including food, water, energy, health, and infrastructure

## Sustainable Development Support

Monitor stages of growth, manage resources, and integrate with Smart Cities for efficient development

## Emergency and Disaster Preparedness

Have the necessary tools to perform early and predictive detections and plan response and recovery efforts

## National Security, Protection, and Governance

Plan, monitor and execute national decision, manage disparate data sources, and disseminate products

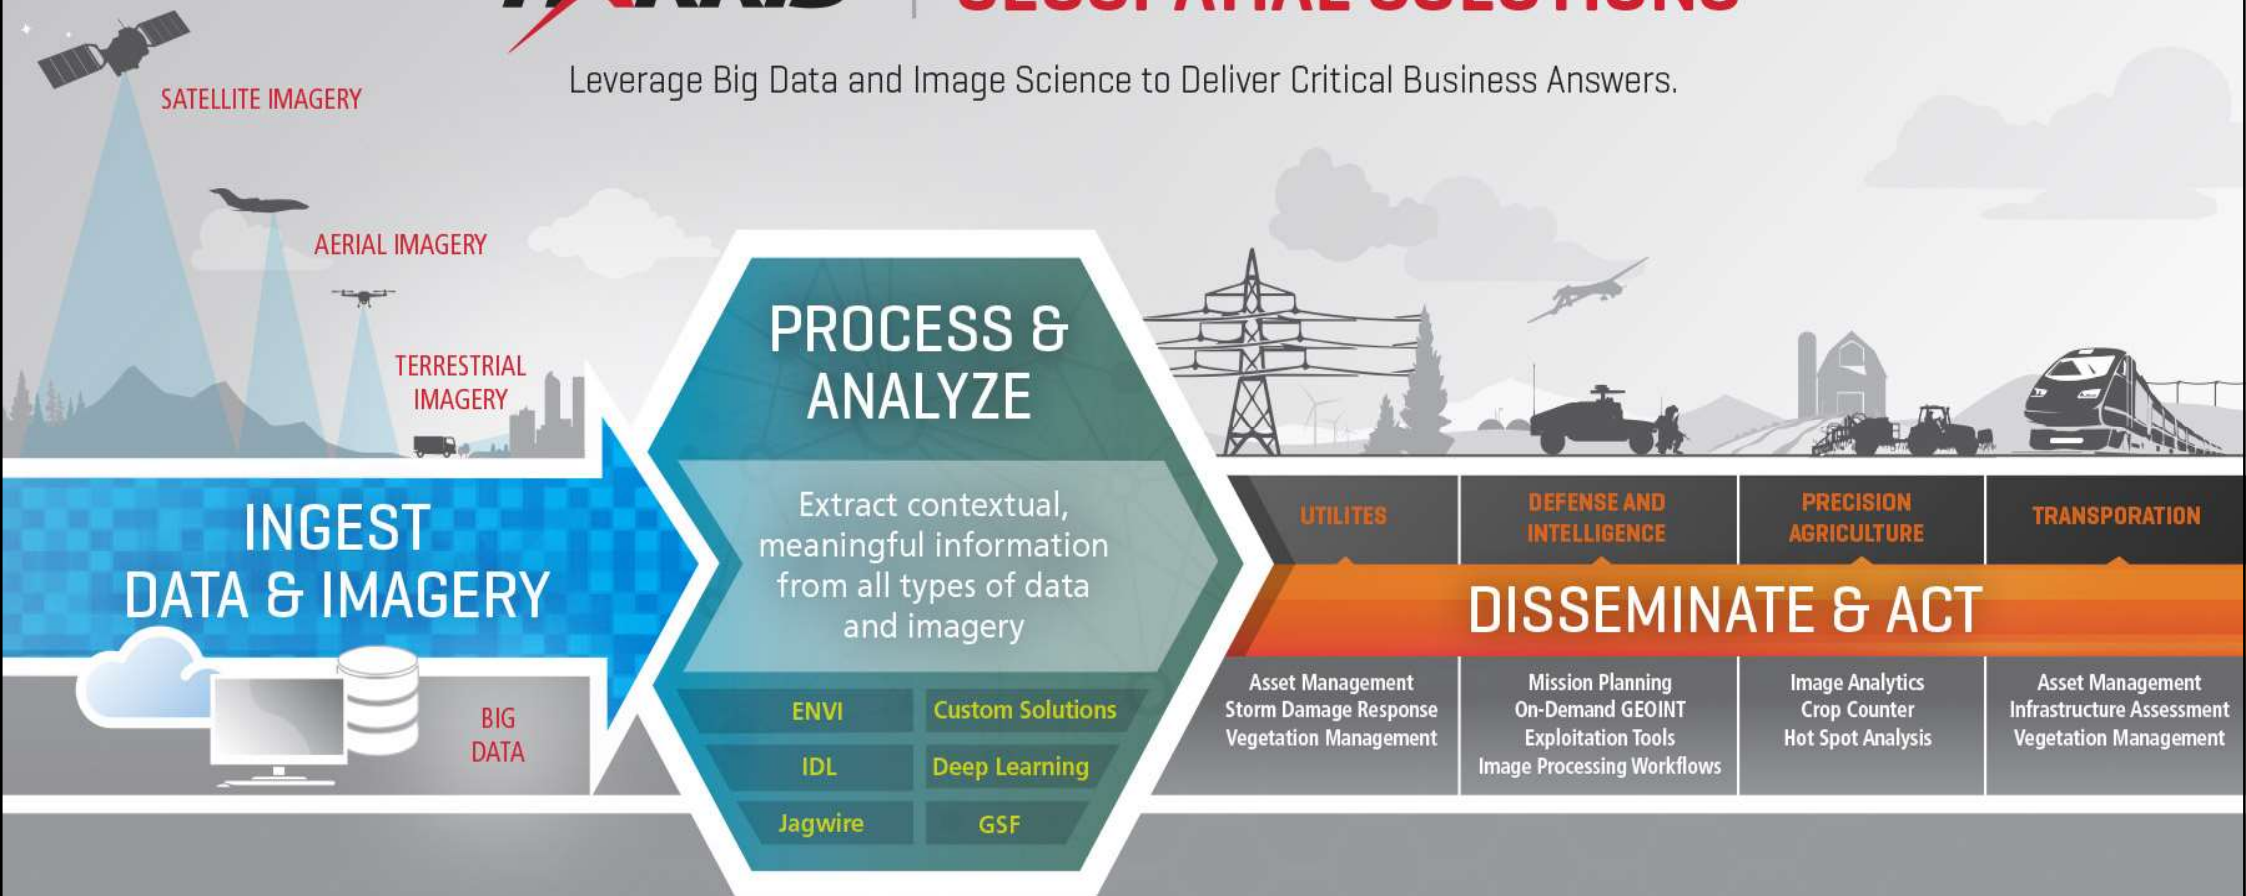

# How We Solve Those Challenges

**HARRIS**

**GEOSPATIAL SOLUTIONS**

Leverage Big Data and Image Science to Deliver Critical Business Answers.

# ENVI Image Analysis Platform

ENVI

Photogrammetry

Feature Extraction

DEM Extraction

Atmospheric Correction

SARscape Suite of Tools

NITF Data

Crop Science

ENVI Services Engine

ENVI Drone Solutions

Deep Learning

IDL Extensibility

Desktop or Enterprise

# ENVI and IDL Vision

Open source software connectivity to allow users to easily use Python in ENVI + IDL. Users can have open source and commercially supported software

Open source

Follow best practices with today's software development for ability to quickly update libraries and use modern tools

Modernization

Improve ENVI + IDL performance and improving data processing speed for all formats

Performance

Provide industry leading visualization capabilities for complex data, large file formats, and web services

Visualization

# ENVI and IDL Roadmap

## 2019 (Completed)

- ENVI Deep Learning Module 1.0
- ENVI SARscape Analytics for ArcGIS Pro
- Opticalscape Terrestrial 5.5.2
- ENVI: ROI tool updates, Feature Counting tool updates, and pan-sharpening improvements

## 2019-2020

- ENVI Deep Learning Module 1.1
  - Multi-class support
  - Data augmentation
- ENVI and IDL Next
  - IDL True parallel processing
  - In ENVI we can read + process the data in parallel for faster performance
  - Spectral library enhancements
  - Defense analyst workflow enhancements

## Next

- Library Updates: Better performance in IDL for matrix multiplication and additional options with the latest version of GDAL
- Innovative routines for working with vectors for re-projecting and generating polylines from masks (example: road extraction)
- Licensing updates
- Web-based labeler for Deep Learning
- Crop Science, Displacement, forestry services

# Latest Product Updates: ENVI Deep Learning

Applied deep learning for geospatial imagery in ENVI, the leading remote sensing and image analysis software

Deep learning workflow in ENVI, built on TensorFlow and Keras

Without needing to program, capabilities include:

- Segmentation (i.e. cloud masking)
- Object detection (i.e. cars or ships)
- Linear feature extraction (i.e. roads)
- Support for nearly any image format and data modality

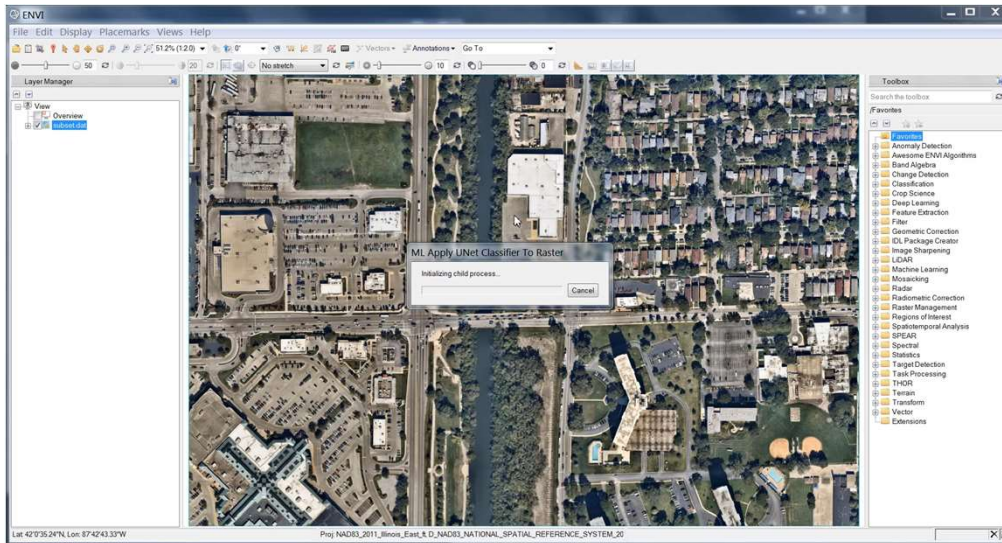

Assess building damage after hurricanes and tornadoes

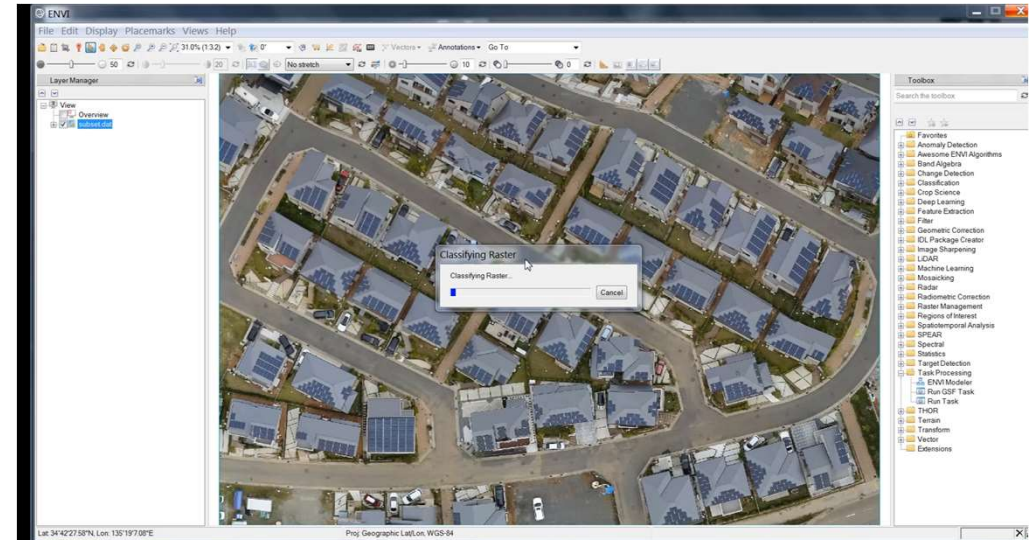

Automated flood detection using SAR

# Deep Learning Examples

Automatically extract road networks from high-resolution UAV, satellite, or aerial imagery

Use UAV imagery to determine the locations of solar panels in a neighborhood

# Deep Learning Case Study: Environmental Monitoring

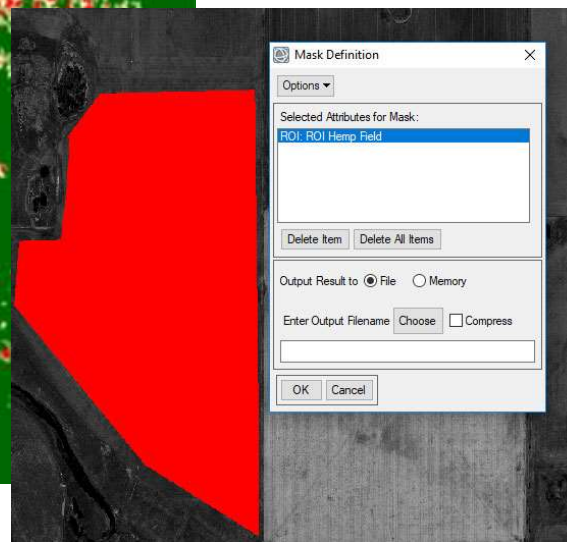

Deep learning model accurately located other mining tailing piles in a different image than it was trained on for Environmental Consultants

# Deep Learning Case Study: Agricultural Hot Spots

Deep learning model trained to find crops and perform hot spot analysis, using Broadband Greenness Vegetation Index in ENVI.

-  Poor Health
-  Healthy Vegetation

*Hotspot results from North American Hemp Field*

# Deep Learning Case Study: Commercial and Retail Studies

Provide near real-time insight into consumer base

Anticipate store trends and locations

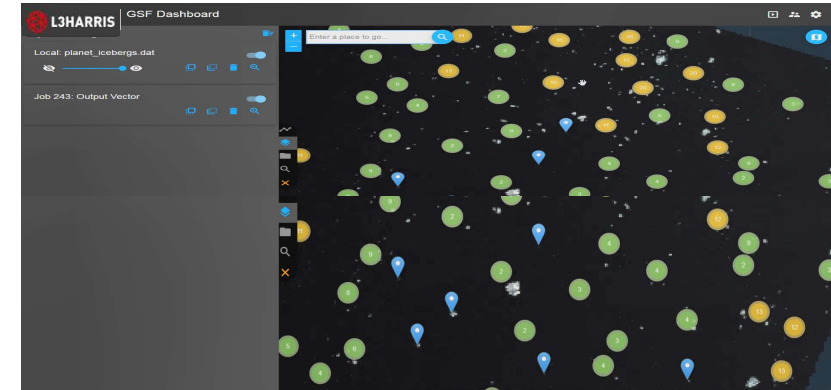

Understand consumer spending by counting the number of cars in store parking lots

# Enterprise Solutions

Example: Transition a deep learning classifier from the desktop to an enterprise application that anyone can access

Create analytics once, with the ability to deploy on premises or in the cloud

Connect to your users with desktop, mobile, or web applications

Customize user experiences that enhance decision making and increase performance

# Deep Learning Web-Based Labeling Tool

- Support for nearly any format of data
- High performance visualization of geospatial data
- Real-time collaboration
- Multi-class labeling for points, polylines, and polygons
- Labels are tracked, providing information based on:
  - Recent activity for users and projects
  - User contribution

*Labeling turn arrows on roads*

# Amplify – Enterprise Imagery Management for Utilities

Enterprise intelligent imagery solution to manage large collections of lidar, video, and imagery, to deliver automated imagery analytics about utility assets

## Transmission and Distribution

- Locate and identify infrastructure
  - Identify assets on the pole
  - Material identification
- Identify and capture damage
  - Generate inspection reports/work orders
  - Improve prep time and efficiency in making repairs
- Monitor Change
  - Track asset condition over time to predict repairs needed before failure

## Manage Vegetation encroachments

- Species identification from hyperspectral imagery to determine potential growth rates
- Measure clearances
  - Reduce fees for non-compliance

# Amplify – Enterprise Imagery Management for Utilities

Defect Identification

Tree identification and measurement

Measure vegetation encroachment

Database location improvement

- Data Management
  - Create a centralized, shared repository for imagery, LiDAR, and associated data
  - Allow users to attach, edit/replace, and remove documents/reports
  - Support batch processing to associate files to one or more GPS locations
- Results through Analytics
  - Identify presence/absence of asset components
  - Determine vegetation encroachment with LiDAR
  - Identify pole tilt angle, set alerts
  - Determine if pole is accessible from nearest road
- Operational Integration
  - Export results to update existing GIS system
  - Access GIS layers to answer planning questions; identify if there is water nearby structure, archeological areas, and more

An aerial photograph of a landscape, possibly a river valley, with a large blue area representing water or a reservoir. The surrounding terrain is colored in shades of brown, tan, and red, suggesting a topographic or land use map overlay. The text "Thank You!" is overlaid in white on the right side of the image.

# Thank You!
